Abstract

An abstract is a short summary of your project. Typically about 200 words, abstracts provides the readers a gist of your work. Abstracts are optional for the project proposal, but you should have one for the mid-term and final report. Just by the abstract, the readers should get a sense of the problem your work solves, broad idea about your approach, and the nature of the results it produces.

1 Introduction

Introductions should motivate the problem you are working on (e.g., what gap does it fill; why should one care?). They also provide a brief sketch of your (proposed) solution, and how it is related to work already done. Introductions typically end with a brief summary of contributions.

Please note that the page-limit is

- 3 pages for the project proposal
- 6 pages for the mid-term report
- 8 pages for the final report

The last section on contributions, and the references are not counted towards this page limit.

2 Related Work

As the name suggests, this section contains the details of past approaches.

Ideally, you should distinguish how the past work is different from your (proposed) work.

3 Methodology

This section describes the details of your exact approach. This section could be optional for the initial proposal, but should contain the details of the baseline for mid-term report, and your approach for your final report.

4 Results

This section describes the results obtained so far, and compares it with past approaches.

Conclusion

Briefly conclude what you have done. Only section in the paper that is in past tense.

Contributions

This section honestly discusses the contributions of each team member. Okay?
